VOTEHUB

Ohio survey methodology statement

VoteHub Ohio Survey #2026-255

Verasight collected data for this project from October 1–20, 2026. The sample consists of 600 registered voters residing in Ohio. In addition, there are 23 partial responses included in the dataset, for a total of 623 responses.

The sampling criteria for this survey were:

1. Ohio resident
2. Registered Voter
3. Adult (age 18+)

The margin of sampling error, which is calculated using the classical random sampling formula, is ±4.2% per state.

The selection criteria for the final sample were passing all data quality assurance checks, outlined below:

45% of Ohio respondents were recruited via text message from voter filer and commercial records.The remaining 55% of Ohio respondents were recruited via email from the Verasight Community, which is composed of individuals recruited via random address-based sampling, random person-to-person text messaging, and dynamic online targeting. All Verasight community members are verified via multi-step authentication, including providing an SMS response from a mobile phone registered with a major U.S. carrier (e.g., no VOIP or internet phones) as well as within-survey technology, including verifying the absence of non-human responses with technologies such as Google reCAPTCHA v3. Those who exhibit low-quality response behaviors over time, such as straight-lining or speeding, are also removed and prohibited from further participation in the community. Verasight Community members receive points for taking surveys that can be redeemed for Venmo or PayPal payments, gift cards, or charitable donations. Respondents are never routed from one survey to another and receive compensation for every invited survey, so there is never an incentive to respond strategically to survey qualification screener questions.

To further ensure data quality, the Verasight data team implements a number of post-data collection quality assurance procedures, including confirming that all responses correspond with U.S. IP addresses, confirming no duplicate respondents, verifying the absence of non-human responses, and removing any respondents who failed in-survey attention and/or straight-lining checks. Respondents that completed the survey in less than 30% of the median completion time were removed.

Unmeasured error in this or any other survey may exist. Verasight is a member of the American Association for Public Opinion Research Transparency Initiative.
